

(Everyone feel free to add things)

Agenda

- Check in:
 - How is everyone feeling for this week?
 - Did anyone see any good memes over the weekend?
- Catch up on what we discussed in our retro
 - What do we have to do so we can go back to the client
 - What's on the trello board?
 - How's our github looking

Things to do

- Updating of tables
 - Make a wall_id column in the posts table
 - Make a comments table
 - Add username column
 - Migrations
 - Everyone needs to update databases
- Translate each of the new specifications into user stories - update the README
 - Update trello accordingly
-

Pairing

- **Group 1**
 - Elena
 - David M
- **Group 2**
 - Toby
 - Ziad
- **Group 3**
 - David S
 - Richard

Miscellaneous

- Everyone comfortable with tech setup for remote?
- Do we want to meet up?

New User Stories

(Feature) Individual User Walls

DESCRIPTION

Users love your app so much they want to feel like they have their own space to manage on your social media platform!

ACCEPTANCE CRITERIA

User is redirected to their wall when they log in

/user_id - change the route

User can go to any `/:user_id` to see each user's wall - modify the index to only show posts where the wall id = current user.id

User can't see any other user's wall without logging in - done already

User is redirected to login page - done already

User can see other users' wall when logged in - need some way of navigating to other people's walls - linking their names on posts

User can post on any user's wall and the post only appears on that user's wall - wall id column

User can not update or delete posts or comments apart from their own (on any wall)

FURTHER CHALLENGE:

If the User doesn't exist, handle requests to `/:user_id` by redirecting to a custom 404 page saying that the user doesn't exist

The User's username can also be used to form the URL

`/:username`

BONUS CHALLENGE:

A User can choose between two or more different fonts AND background colours for their wall

Toby asked: [@Katerina](#) the last user story in the acceptance criteria mentions comments yet before that they have not been mentioned. Should they be implemented now?

Katerina said: yes please
